

# Summer Math Ideas

Kindergarten

Color in shapes as you complete them.

Count the number of pages in a book each day.

Check off the days of summer on a calendar. Count the days each month.

Count how long it takes for the traffic light to change color.

Use today's date. Find two ways to show that number.

Collect objects in nature as you walk (in your neighborhood, at the beach, etc). Find two different ways to sort the items.

Play Addition Roll  
Roll two dice. Add the numbers together, repeat!

How many buckets of water does it take to fill a kiddie pool for your younger sibling or relative?

Estimate the number of cups it will take to fill a pitcher, bucket or other container.

Build a sandcastle using different solid shapes. Name the shapes as you build.

Cook something with your parents. Point out how we use math to measure ingredients.

Go for a walk!  
What numbers do you see? What is the greatest number you saw?

The answer is 10.  
What is the question?

Play a board or card game that involves counting, moving a certain number of spaces or matching numbers.

Play some games on Sumdog.

When you are in the car or running errands, look for plane shapes around you. Name them and count them.

Practice reading a digital clock. Tell the time each night before you go to sleep.

Build something out of recycled items. Talk about the shapes you used and how many of each shape.

Grab a handful of pennies, nickels or dimes. Practice counting by 1's, 5's or 10's.
